## 2022 County Health Rankings (CHR) Summary

Davis County, UT

[countyhealthrankings.org](http://countyhealthrankings.org)

According to the 2022 County Health Rankings (CHR) report, **Davis County is the 4th healthiest county in Utah and the healthiest along the Wasatch Front**. Rankings are based on weighted categories related to the health status of our population (health outcomes), and modifiable factors that influence how well and how long we live (health factors). **Clinical care is the county's greatest strength** while the **physical environment continues to be Davis County's greatest challenge** (Table 1). Compared to 2021, ranks for health behaviors and social economic factors decreased while ranks for clinical care and physical environment improved.

**Table 1. 2022 County Health Rankings by Category, Davis, UT**

Health Outcomes: 4 <sup>th</sup>			
Length of Life: 5 <sup>th</sup>		Quality of Life: 3 <sup>rd</sup>	
Health Factors: 4 <sup>th</sup>			
Behaviors: 2 <sup>nd</sup>	Clinical Care: 2 <sup>nd</sup>	Social & Economic: 3 <sup>rd</sup>	Physical Environment: 15 <sup>th</sup>

**Davis County is among the healthiest (top 10%) of all U.S. counties in 44% of ranked measures**, including: premature death, days in poor/fair health, poor physical health days, poor mental health days, smoking, excessive drinking, physical inactivity, teen births, preventable hospital stays, high school completion, some college education, children in poverty, income inequality, children in single-parent households, and injury deaths. The county is also among the top U.S. performers in these unranked areas: COVID-19 age-adjusted mortality (new in 2022), premature age-adjusted mortality, child mortality, frequent mental distress, food insecurity, motor vehicle crash deaths, insufficient sleep, disconnected youth, reading scores, median household income, children eligible for free or reduced price lunch, childcare cost burden (new in 2022), homicides, severe housing cost burden, and broadband access. The county continues to have many assets related to social economic factors. However, **significant health disparities exist between race/ethnicity groups**, even within the county's strongest areas.

Davis County measures worse than the state average for: diabetes prevalence, obesity, physical inactivity, alcohol-impaired driving deaths, insufficient sleep, all dental and healthcare provider ratios, social associations, gender pay gap, air pollution, driving alone, long commutes, and traffic volume. The report indicates that improvement in the areas of obesity, social associations, and air pollution would have the greatest impact on the county's future overall ranking.

In 2022, CHR added unranked measures for COVID-19 mortality plus six equity measures: school segregation, school funding adequacy, gender pay gap, living wage, childcare cost burden, and childcare centers. Of the new measures, Davis County is doing well in COVID-19 deaths, little segregation in schools compared to county population, adequate school funding, a lower living wage than the state, and low childcare cost burden. Gender pay gap is worse compared to the state. The measure for childcare centers could use further exploration.

The annual Rankings provide a snapshot of how health is influenced by where we live, learn, work, and play. The Rankings hit on many of the reasons Davis County is a healthy place to live and show we have room for improvement in some areas. It is one of many tools used to guide community health assessment and improvement efforts.
